wherever the european has trod death seems to pursue the aboriginal so wrote charles darwin in 1836 though there has been considerable discussion concerning their precise demographic impact reflected in the articles here there is

no doubt that the arrival of new diseases with the europeans such as typhus and smallpox had a catastrophic effect on the indigenous population of the americas and later of the pacific in the americas malaria and yellow fever also came with the slaves from africa themselves imported to work the depopulated land these diseases placed europeans at risk too and with some resistance to both disease pools africans could have a better chance of survival also covered here is the controversy over the origins of syphilis while the final essays look at agricultural consequences of the european expansion in terms of nutrition both in north america and in europe

this book provides a conceptually organized framework to understand the phenomenon of biological invasions at the anthropocene global scale most advances toward that aim have been provided from north american and european researchers with fewer contributions from australia and south africa here we fill the void from the neotropics focusing on the research experience in south american countries with a strong emphasis on argentina and chile the text is divided into two parts the first half comprises self contained chapters providing a conceptual bibliographic and empirical foundation in the field of invasion biology from an anthropocene perspective the second half reviews the ecology biogeography and local impacts in south america of exotic species groups european rabbit eurasian wild boar canadian beaver north american mink and holarctic freshwater fishes which are shown to be useful models for case studies of global relevance

this publication attempts to convey the huge potential of bio anthropology in the study of ancient civilizations it is based on the papers presented at an international colloquium in 1990 by over 20 experts in the field

since the appearance of homo sapiens on the planet hundreds of thousands of years ago human beings have sought to exploit their environments extracting as many resources as their technological ingenuity has allowed as technologies have advanced in recent centuries that impulse has remained largely unchecked exponentially accelerating the human impact on the environment humans versus nature tells a history of the global environment from the stone age to the present emphasizing the adversarial relationship between the human and natural worlds nature is cast as an active protagonist rather than a mere backdrop or victim of human malfeasance daniel r headrick shows how environmental changes epidemics climate shocks and volcanic eruptions have molded human societies and cultures sometimes overwhelming them at the same time he traces the history of anthropogenic changes in the environment species extinctions global warming deforestation and resource depletion back to the age of hunters and gatherers and the first farmers and herders he shows how human interventions such as irrigation systems over fishing and the industrial revolution have in turn harmed the very societies that initiated them throughout headrick examines how human driven environmental changes are interwoven with larger global systems dramatically reshaping the complex relationship between people and the natural world in doing so he roots the current environmental crisis in the deep past
